

Applying Extended Time Accommodations to Gradescope Exams

To create a time limit extension for a student in Gradescope:

1. First set a maximum time permitted value when creating the online assignment (or edit your current online assignment to have a maximum time permitted value).

When the respective student starts their timed online assignment, they'll see the extended time limit rather than the default one.

Please note that extensions currently only apply to timed online assignments. However, Gradescope is working on extensions for due dates (for both online and PDF-based Gradescope assignments) as well.

Gradescope has a [webpage](#) on remote assessments for more information.
